

Web Service

What is Web Service?

Definition of Web Service

- You can use the SMS Messaging Web Service HTTP API to send one, or hundreds, of text messages in seconds. The interface is simple to integrate with, particularly from websites and scripting languages such as Perl, Java script & PHP and quick to setup. We provide free sample code in some of the most common scripts to get you started.

Web Service facility allows clients to

- Integrate their systems with ours.
- Have systems automated to send out data to your clients

How does it work?

- You can download free sample code in some of the most common programming languages to get you started and there are some content based examples below. Note that where an example is broken across more than one line, this is for readability and must not be submitted that way.

Where can I use it?

- Clients can choose how they would like the systems to be setup to their needs.

Costs? (all costs incl VAT)

- R1 140.00 Once-off setup fee.
- R570.00 per month subscription fee.
- R0.25 per SMS
- Development: R570.00 Per hour
 - Unfortunately, this is determined by the amount of development needed to create your USSD campaign.
- Please contact us on 011 782 9720/ Sales@stouf.com to get a quote today!
